

Hand Hygiene Compliance

Improving hand hygiene, through the appropriate use of alcohol-based hand rub or soap and water, is the single most effective way of reducing the spread of infections.

The Credit Valley Hospital implemented the *Just Clean Your Hands* campaign in April 2008, which is a multi-faceted hand hygiene program. The campaign includes education for health care providers, patients and visitors, as well as an audit process to evaluate the hand hygiene practices of health care providers. Hand hygiene involves everyone in the hospital, including patients. Patients and their visitors should also practice good hand hygiene before and after entering the patient's room.

Rate of Hand Hygiene Compliance Before & After Patient/Patient Environment Contact

2012-13 - CVH Data

| | |
|---|-----|
| % compliance before initial patient/patient environment contact | 82% |
| % compliance after initial patient/patient environment contact | 87% |

Interpretation:

20112-2013 (April 2012-March 2013) Fiscal Interpretation:

The rate of compliance for both before and after patient/patient environment contact continues to increase in 2012-2013 as compared to the previous year. The Credit Valley Hospital site continues to implement strategies to improve hand hygiene compliance and sustain the hand hygiene program hospital-wide by ensuring appropriate access to hand hygiene resources, enhancing education, and providing timely feedback to stakeholders.
